

Bioganix Composting Ltd

Parham, Suffolk

In Vessel Composting Plant Operators

Installation Of 4 Off In-Vessel Rotary Drum Composting Systems

Ebbfleet Engineering Services secured the contract for the offloading, building and installation of 2 off 20M long x 4M diameter and 2 off 12M long x 4M diameter rotary drum composting systems at Bioganix's Parham, Suffolk composting facility.

Ebbfleet Engineering Services provided their 12 tonne lifting capacity forklift truck with heavy-lift jib attachment to offload the drum sections weighing up to 7 tonnes each.

Prior to installation a full survey of the floor was undertaken and machine datum lines marked on the floor. Sub-frames were aligned and levelled and fixed down with chemical anchor bolts. The drive systems were then installed. The drum sections were then lifted on the sub frames and drives and bolted together.
