

Cabelte Holdings SGPS SA

Kent, UK to Arcozelo, Portugal

Manufacturers Of Electrical and Telecommunications Cables

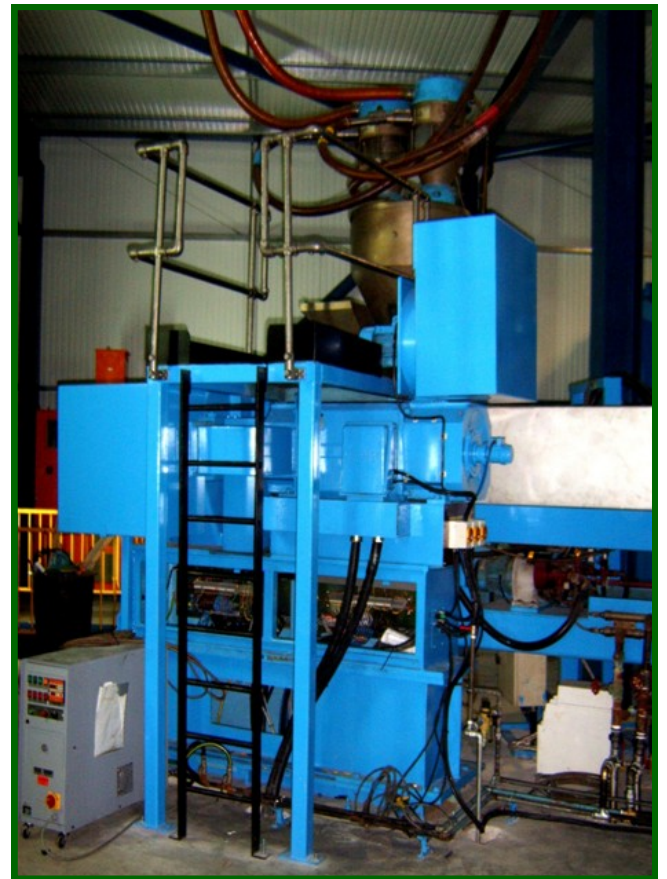

Relocation Of Nokia Mailefer CCV Cable Making Line

Prior to dismantling a full survey of the 200M long machine was undertaken. All electrical control cables were numbered, tagged and recorded. The machine parts were match marked and digitally photographed.

The machine was then systematically dismantled backwards from the pay-off end, and the component parts transported by road to the Cabelte factory in Arcozelo, Portugal. There were a total of 13 articulated vehicle loads of machinery, including an abnormal load for the 12 tonne 4 metre diameter capstan wheel.

Ebbfleet Engineering Services provided a project management team to oversee the rebuilding and installation of the machine. This phase of the work was able to commence in Portugal before dismantling was finished in the UK. This saved Cabelte valuable time in getting the machine commissioned and into production.

The contract was completed on time, to budget, and to the complete satisfaction of the customer.
