

Ward Recycling

Teesside, UK

Material Recycling Facility

Single Stream Recycling System And Nihot Glass Clean-Up System

Ebbfleet Engineering Services undertook the mechanical installation of a new Bulk Handling Systems Europe (BHS Europe) single stream recycling system with the capacity to process 16.5t per hour.

We also carried out the installation of a Nihot glass clean-up system with the capacity to process 10t per hour.

We were contracted by the Eugene, Oregon-based recycling systems provider to carry out the mechanical installation of both systems simultaneously.

The end user, Ward Recycling, required the build to be completed by Christmas 2014.

Works commenced on site early November 2014 and successfully achieved completion of the entire installation within the required timeframe.

Ebbfleet Engineering Services Ltd supplied qualified supervision, skilled installation personnel and all specialists lifting equipment required to undertake the works.

This is the second BHS Europe project awarded to Ebbfleet Engineering Services after a successful 1st Installation carried out at a new SITA UK facility based in Avonmouth in 2013.
